

Behaim ITS

AI that speaks your language. Securely. On-site.

At BehaimITS, we help businesses unlock the potential of modern AI without compromising on security or data control. We build on top of world-class open-source language models, tailoring them specifically to your environment and needs.

WHAT WE DO

Fine-tuning open-source language models on your data

We can transform your documents, know-how, internal processes, and communication style into an AI model that:

- Deeply understands your business.
- Responds consistently and accurately.
- Grows alongside your data.

The result is an AI assistant or automation that isn't just "general" - it is truly yours.

DEPLOYMENT ON YOUR TERMS

Optimized for on-premise operation

We deploy AI solutions in a way that ensures your data never leaves your infrastructure. This is ideal for organizations managing:

- Sensitive data.
- Regulatory requirements (e.g., ISO, NIS2, GDPR).
- The need for full operational control.

KEY BENEFITS

- Faster processing of information and documents.
- Automation of repetitive tasks.
- Enhanced customer and internal support.
- AI tailored to your company's unique reality.

Do you want AI that is secure, efficient, and fine-tuned on your own data? Get in touch with us—we will prepare a tailor-made solution for you.

SECURITY FIRST

Working with proven models

We utilize models with clear origins, transparent licensing, and verified security frameworks. For you, this means:

- Greater predictability regarding compliance and regulations.
- Transparent technology with accessible documentation.
- Reliable solutions suitable for critical infrastructure and the public sector.
